## **Edge Access Demonstrates VoiceWise at NAB**

**Edge Access**, a leading developer and integrator of VoIP solutions for industry and government, unveiled their premier VoiceWise UAD product at the National Association of Broadcasters Conference in Las Vegas.

VoiceWise Universal Access Device (UAD) provides a cost effective, flexible solution that enables secure, integrated Voice over Internet Protocol (VoIP) and data communications anytime, anywhere and with any wired or wireless network. Its' innovative technology provides unrivaled voice quality and dependability, making VoIP the best solution for optimizing performance.

Working with WorldNet, who provides satellite terminals for broadcasters, **Edge Access** installed VoiceWise into a variety of broadcast providers' suite of equipment to prove the voice quality, dependability and ease of integration.

"Whether broadcasters are putting a story together or doing a live feed, network dependability has become a deciding factor in competitive reporting, which directly affects ratings and profitability." says Rob Veschi, President of **Edge Access**. "VoiceWise not only proved dependable for broadcasting, but also proved a cost effective way to optimize satellite transmission by sending data and voice over the same network for all operational applications - from phone to fax to laptop."

In addition, Mr. Veschi said they were pleased find that equipment providers were identifying other applications beyond content broadcasting for the VoiceWise UAD - from providing communications capabilities to offshore oil rigs to outfitting custom vehicles and trailers for sporting events.

### **About NAB**

The National Association of Broadcasters (NAB) spring convention is the world's largest electronic media show covering the development, delivery and management of professional video and audio content across all mediums.

### **About Edge Access**

As a technology developer and integrator, **Edge Access** continues to pioneer advanced VoIP (Voice over Internet Protocol) and data solutions for industry and government. Designed for universal adaptability, **Edge Access** solutions offer functionality that amplifies performance of virtually any network infrastructure. The company's premier "future-proof" VoiceWise UAD series, gateway and softswitch provide converged voice and data communications with unrivaled security, voice quality and dependability.
