## **Edge Access Demonstrates Multi-Media Package at EMEX2003**

**Edge Access**, a leading developer and integrator of VoIP solutions for industry and government, unveils their Multi-Media Package (MMP) at the Emergency Management/Homeland Security Exposition in Orlando, Florida, November 17-19, 2003.

This image communication technology offers the flexibility of both video-conferencing and high-resolution photos with the freedom to do so by remote access and remote control. MMP in a mobile environment combined with the voice quality of our VoiceWise Universal Access Device (UAD) provides a comprehensive, cost-effective solution that enables secure, integrated Voice over Internet Protocol (VoIP) and data communications anytime, anywhere and with any wired or wireless network. The combined innovative technology provides effortless processing and unrivaled voice quality and dependability, making VoIP the best solution for optimizing performance.

”Imagine, if you will, being deployed right after a hurricane and not even being aware that local services such as telephone, power, cell service, etc. are not available or more importantly, NOT HAVING TO CARE THAT THOSE SERVICES ARE UNAVAILABLE. You can complete your mission regardless of the environment and or state of the local telecommunications and power services.” Says Rob Veschi, President & CEO of Edge Access.

### **About EMEX2003**

EMEX 2003 joins homeland security and disaster preparedness suppliers under the auspices of the International Association of Emergency Managers (IAEM). IAEM’s 51st Annual Conference: “Connecting Communities...Comprehensive Emergency Management.” is co-Sponsored by the National Association of Manufacturers.

### **About Edge Access**

As a technology developer and integrator, **Edge Access** continues to pioneer advanced VoIP (Voice over Internet Protocol) and data solutions for industry and government. Designed for universal adaptability, **Edge Access** solutions offer functionality that amplifies performance of virtually any network infrastructure. The company's premier "future-proof" VoiceWise UAD series, gateway and softswitch provide converged voice and data communications with unrivaled security, voice quality and dependability.
